

Cold Weather Precautions

It's that time of year again to issue reminders of practices and precautions for working in the colder months.

The below links direct you to four Technical Bulletins dealing with possible weather-related issues. They are posted on our website under the Literature / Technical Bulletins section. They contain the information you need in order to educate or remind your employees and your customers about the precautions to address during the colder months. The bulletins are:

- [Cool Weather Application of EIFS, Stucco & Acrylic Surfacing Systems](#)
- [Tenting & Inclement Weather Application](#)
- [Early Wash Off Synthetic Finishes](#)
- [Cold Weather Precautions](#)

If you have other questions related to product shipping, storage, application or drying in cold temperatures, please contact the BASF Wall Systems Technical Department at (800)-589-1336.
