

Cold Weather Precautions

It's that time of year again to send out suggestions to help you and your customers continue working most effectively through the cold months.

Two years we issued four Technical Bulletins dealing with weather-related issues. They are posted on the website with other technical bulletins. They contain the information you need in order to educate or remind your own employees and your customers about the precautions to address during the cooler and colder months. The bulletins are:

- [Cool Weather Application of EIFS, Stucco & Acrylic Surfacing Systems](#)
- [Tenting & Inclement Weather Application](#)
- [Early Wash Off of Synthetic Finishes](#)
- [Cold Weather Precautions](#)

Those of you who are reading this in your e-mail can link directly to the bulletins by clicking on the title of the document. If you are reading from a faxed version, you will find these bulletins along with other technical bulletins on our website.
